DETAILED ACTION

This Office Action is in response to Applicant's Preliminary Amendment filed March 25, 2008.

Claim 1 is amended.

Claims 2-27 are cancelled.

Claim 1 is pending and herein considered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Please replace the 12th line "content server device id, wherein calculating a content server device key" of Applicant's claim 1 appearing on page 1 with the following line:

--content server device id, wherein calculating the content server device key--

Reasons for Allowance

The following is an examiner's statement of reasons for allowance:

The present invention is directed to a method of controlling with rights objects delivery of broadcast encryption content for a network cluster from a content server outside the cluster. Independent claim 1 identifies the uniquely distinct features of 'encrypting in the network device a cluster id in dependence upon a content server device id for the content server including calculating a content server device key, wherein calculating a content server device key further comprises hashing, with a one way hash algorithm, the management key and the content server device id and encrypted the cluster id with the content server device key. A number of prior art references including but not limited to the following: Foster et al. (US 2002/0198351), Lotspiech et al. (US 2005/0086532) and Cerruti et al. (US 2006/0126831) disclose methods for controlling with rights objects the delivery of broadcast encryption content utilizing key management blocks, binding keys, hashing algorithms and unique data tokens but fail to teach the encryption of a cluster id in dependence upon a content server device id including the hashing of a management key and content server device id before encrypting the cluster ID with the content server device key in order to provide additional levels of security generally by providing a content server with enough information for it to package content for a specific cluster. The prior art, either singularly or in combination, fail to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
